J.T.M.® Single Serve Cheese Sauce Trays' Heating Instructions

J.T.M. Codes: 5965, 5966, 5967 • Packed: 48 – 4 oz. servings/case

- Instructions are based on heating a full case of 48 single serve trays.
- Heating times may vary based on the oven load and/or the quantity of trays being heated.
- Do not remove the film covering before heating.

FROM THAWED:

- To thaw, remove trays from the case being careful not to puncture the film on any of the product inside the case.
- Place the individual trays onto pans and put into walk-in cooler (40°F or cooler) for 24 to 36 hours. It takes longer to thaw the trays if they are left inside the case. Please allow 36-48 hours for thawing if trays are left inside the case.

Preferred Method - Convection or Conventional Oven:

1. Preheat the oven to 350° F. For convection oven, set fan on low.
2. Place thawed trays on a sheet pan lined with parchment paper (if available). *Note: 20 trays will fit on a full-size sheet pan. Full-Height Mobile Speed Rack Caddy – Holds (20) 18 x 26" Pans. It will hold 400 trays / 10 cases of product.*
3. Heat for 8 - 10 minutes, or until the product reaches 145°F (or to the desired serving temperature based on local requirements).
4. Serve immediately or move to a heated holding cabinet until ready for service.
5. If consuming immediately, carefully remove the film and stir to equalize the temperature.

Steamer:

1. Place thawed trays on a perforated tray/pan. Note: 8 trays will fit into a perforated half pan.
2. Place trays in the steamer set at 212°F for 10-15 minutes, or until the product reaches 145°F (or to the desired serving temperature based on local requirements). **Condensation may form on top of the trays during steaming. Be careful when removing the trays from the pan.*
3. Serve immediately or move to a heated holding cabinet until ready for service.
4. If consuming immediately, carefully remove the film and stir to equalize the temperature.

Microwave (1000 watt):

1. Place one thawed tray in the microwave. DO NOT REMOVE THE FILM.
2. Heat for 45 seconds - 1 minute or until the product reaches 145°F (or to the desired serving temperature based on local requirements). Note: Heating time may vary based on the wattage of the microwave and the number of trays being heated.
3. Carefully remove the film and stir to equalize the temperature.
